The **MATRIX TWISTER™** system is an automated method conveying pressure sensitive adhesive waste matrix and edge trim to a compactor, baler, or other receptacle. The unit twists the matrix into rope form, reducing the amount of exposed adhesive and strengthening it for ease of conveying. It eliminates time consuming manual matrix removal

Patented Matrix Twister Systems (Pat. No. 6,547,913)

Pneumatic Matrix Twister Removal **ADVANTAGES**

- *Production increase - eliminate manually stopping the press to remove waste matrix*
- *Press speed increase - eliminate slowing the press for difficult spooling*
- *Provides additional floor space adjacent to press*
- *Ability to use narrower stock - may remove matrix as narrow as 1/16"*
